*A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

The patient, Mrs. P., aged thirty, from Dakota, had always been healthy, with the exception of chronic indigestion, for which she had been under medical treatment off and on for years, until a year ago last March, when she noticed intermittent pains in the right side, soon followed by a whitish sediment in the urine. She gradually lost strength and flesh, and the attacks of pain, often running down the right leg, became more frequent and more severe. On admission to Emergency Hospital she looked exceedingly pale and emaciated; a swelling 7 inches long and 4 inches broad was found in the right side of the abdomen, extending from 1 inch to the right of the umbilicus outward and backward into the region of the kidney. The tumor was somewhat tender to the touch, indistinctly fluctuating, and slightly movable below and separated from the liver. An exploratory puncture in the lumbar region disclosed the presence of stone and brought out pus. Pulse, 100; temperature, 101 F. On January 21st I made nephrotomy by lumbar incision. When the surface of the kidney was reached, fluctuation was distinctly felt through a thin layer of kidney tissue. This was divided by Paquelin s cautery, and a pint and a half of fetid pus evacuated. Digital exploration revealed three stones the size of a hazelnut, and a large one, 2 1/2 inches long, with projections corresponding to the calices of the kidney, slightly movable, but still so firmly embedded that it was necessary to divide it by...
